Check Your Pumps Using Your iPhone, iPod or iPad Anytime, Anywhere!

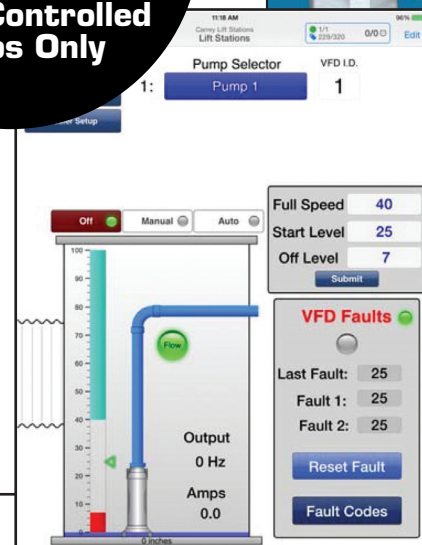

(Not currently compatible with Android operating systems.)

A base unit is mounted at your farm or business and is connected to your internet service. An antenna is used to receive signals from the remote unit. For best results, this antenna should be mounted in an elevated location, like the roof of a barn or silo. Up to 20 pumps can be monitored with each base unit.

Specifications:

- ✓ NEMA 4X UV rated enclosure.
- ✓ Twenty-two mile communication distance using a large master antenna and a directional antenna at the pump site.
- ✓ Master unit capable of monitoring up to twenty individual pumps.
- ✓ Remote unit is capable of monitoring up to four pumps per location.
- ✓ Remote antenna choices:
 1. 2 DBI rubber antenna - 5 miles LOS (Line of sight) Standard.
 2. 5 DBI rubber antenna - 10 miles LOS (optional).
 3. 6 DBI Directional Antenna - 22 miles LOS (optional).
- ✓ Master Unit will be assigned it's own IP address. Monitoring can then be done anywhere there is internet access via 3G network or wifi.
- ✓ Downloadable app (only 99¢) for your iOS device (iPhone, iPod or iPad).
- ✓ No Monthly Subscription fees.
- ✓ Each base unit includes one activation code for use with one iOS device (iPhone, iPod or iPad). Each device requires it's own activation code. These codes can be transferred to a new device when necessary.
- ✓ Additional activation codes are available for \$100 net.
